

Re. <https://akasha.org/blog/2019/09/02/generative-identity-beyond-self-sovereignty>

Doc Searls asked for a comparison table, 11 Sept 2019.

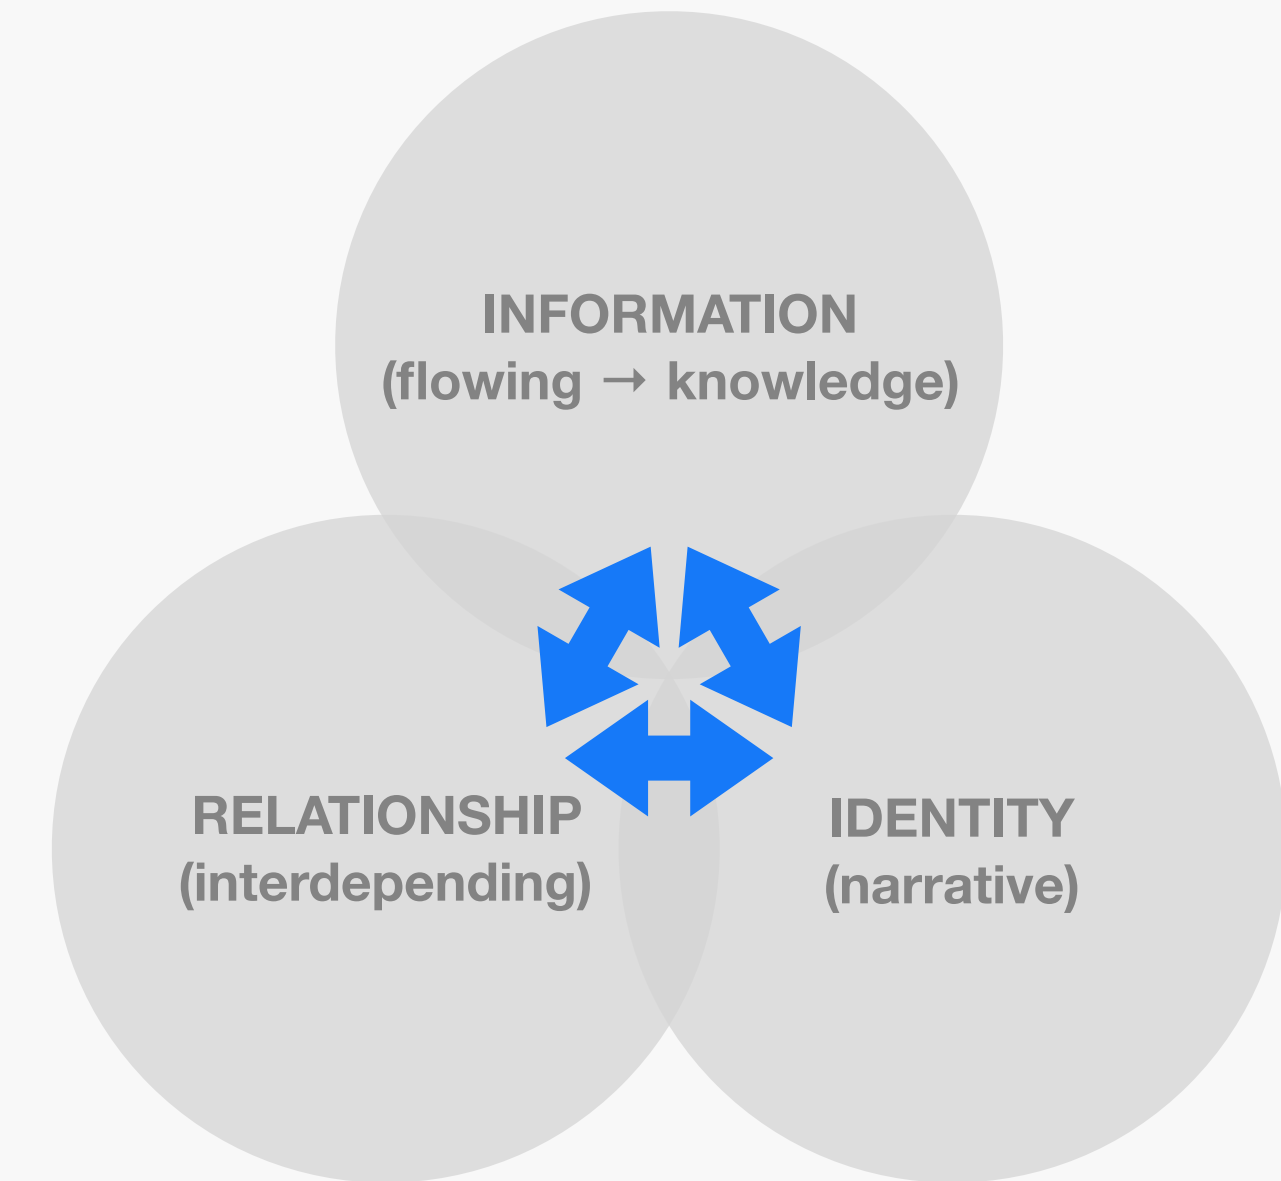

A first attempt very much open to feedback / correction.

Draft 0.1, 12 Sept 2019

SELF-SOVEREIGN IDENTITY	GENERATIVE IDENTITY
noun-like	verb-like
persistence	change
technological	sociotechnological
technologists + lawyers	interdisciplinary
privacy / digital convenience	psychological, sociological, & ecological health
mechanistic / micro	complex / macro / biomimetic
identity is an object	identity is information
own your identity	ownership is incongruous
existence / "I"	flux / structuration / "I" + "we"
self doesn't feature	supporting narrative selves
control	agency — individual & collective
access to personal data	co-constitution with interpersonal data
relationships are an object	co-constitution with relationships
directing credentials & identifiers	informational omni-directionality
eliminating friction	friction is an important system property
universality / interoperability	generativity
can never be verb-like	may accommodate the noun-like?
likely degenerative?	hopefully generative?
will ossify, frustrating generative identity?	requires commoning

PERSONAL DATA	INTERPERSONAL DATA
legal	natural
data subjects	humans +
node-centric	edge-centric
control	agency
tree-like	rhizomatic
facsimile	cache
privacy	privacy + collective intelligence

Identity and relationships and information are reciprocally defining and co-constitutive.
See *Leadership and the New Science*, Margaret J. Wheatley.
